Agenda

- **Organization**
- **Sea basing-Seabase**
- **The Marine Expeditionary Brigade (MEB)**
- **Maritime Expeditionary Capabilities**
 - Assault Echelon
 - MPF(F)
 - Connectors
- **MEB**
- **MPF(F)**
- **Enablers**
- **Experimentation**

Combat Development Directorate

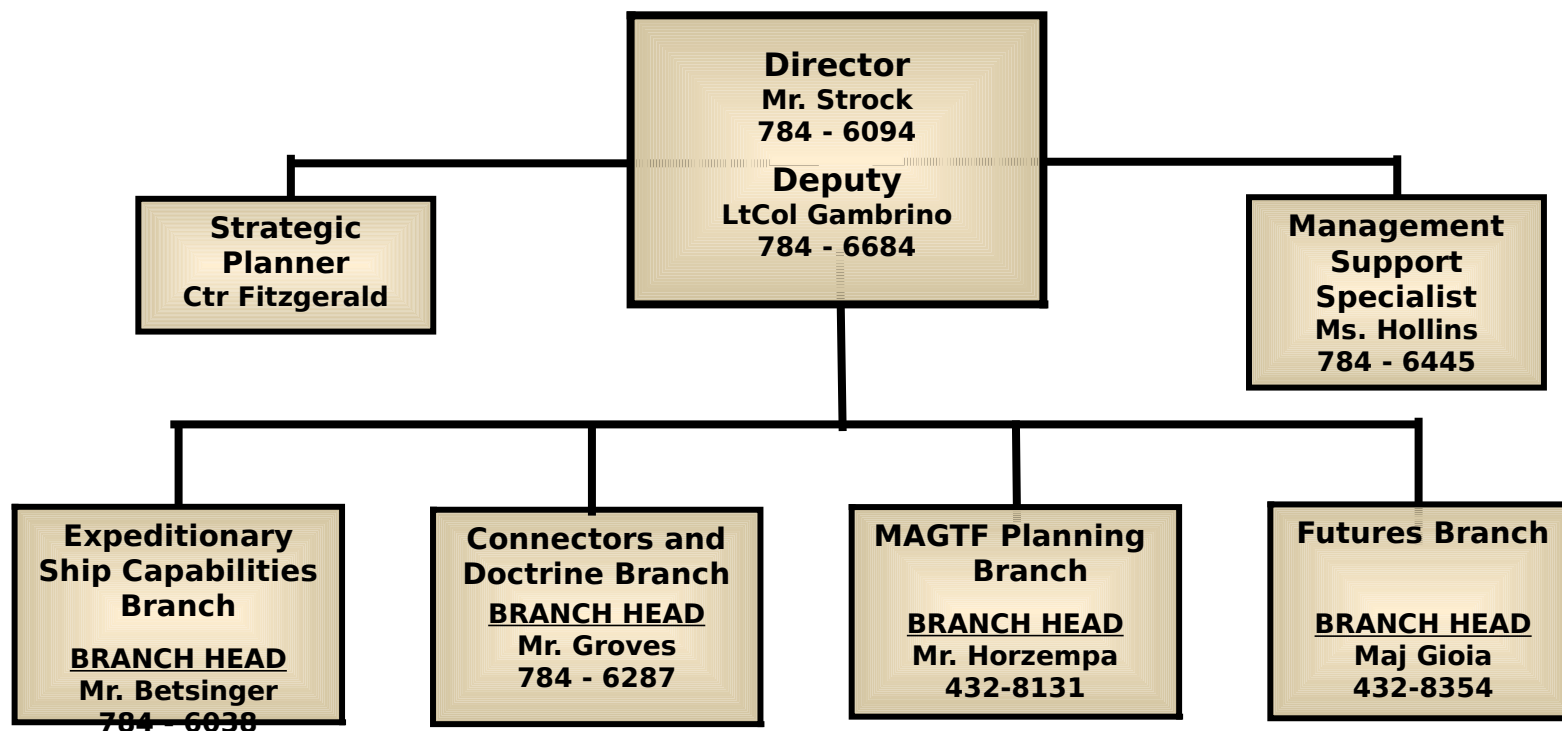

Seabasing Integration Division

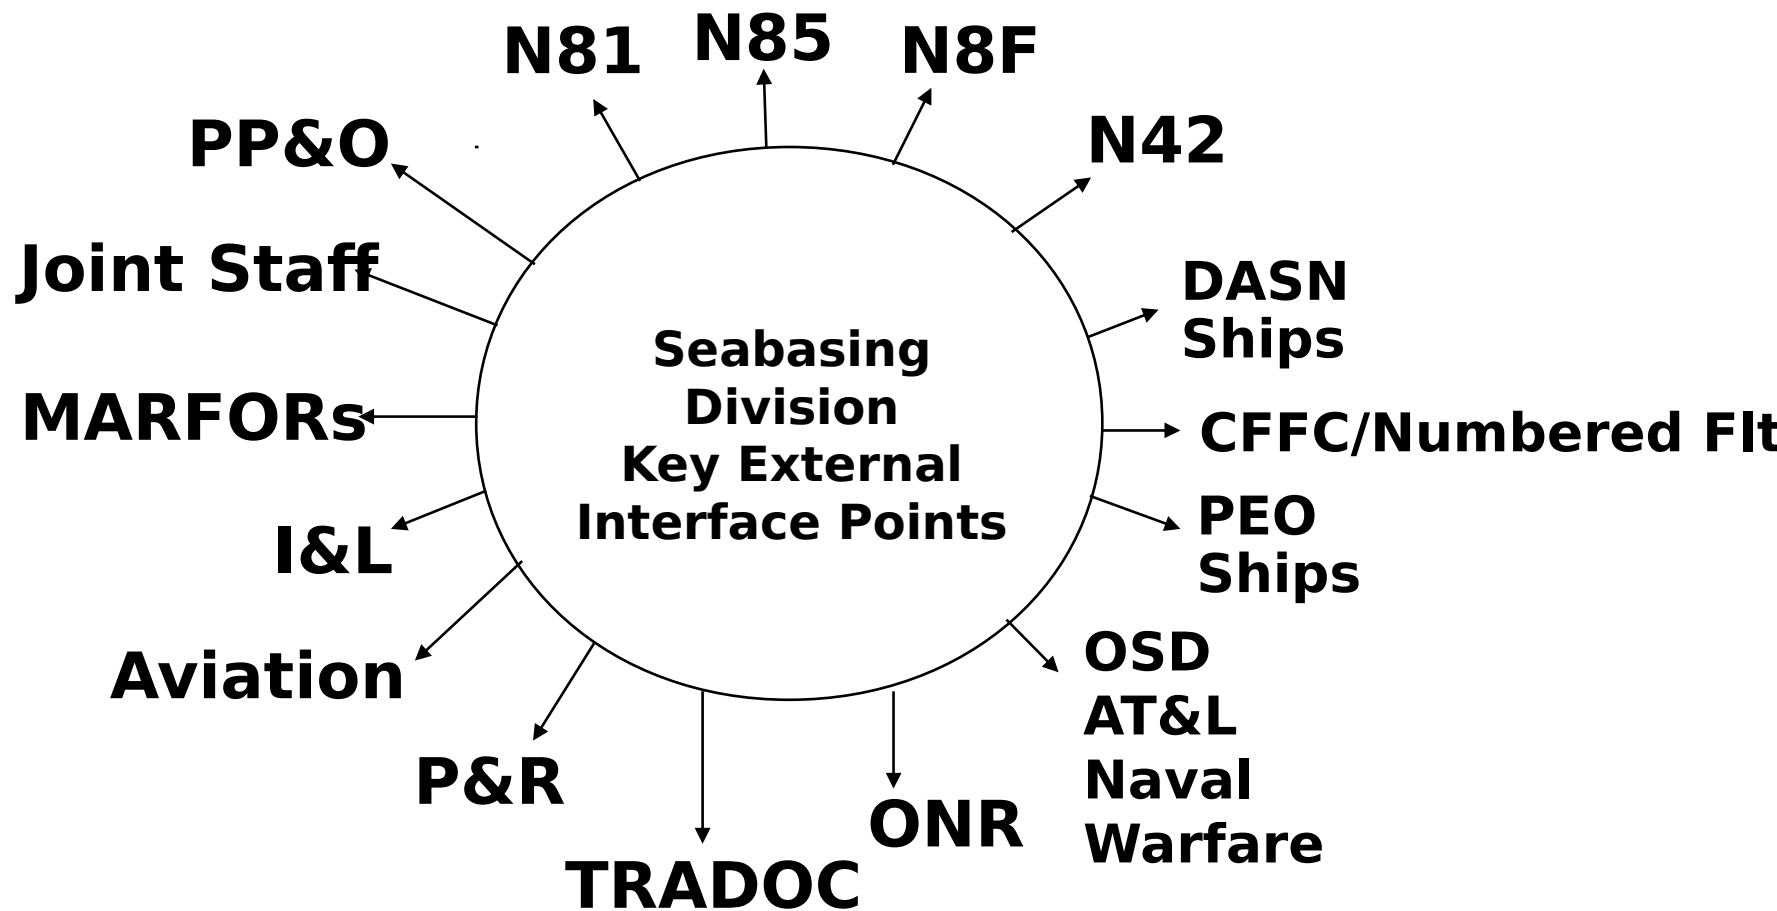

Mission: Develop future Marine Corps expeditionary maritime requirements; ensure OPNAV resource sponsor/s understand and accurately convey these requirements. Represent the Deputy Commandant for Combat Development & Integration on all Seabasing platform matters. Ensure the Marine Corps is fully supported by the Navy's Long-Term Plan for Shipbuilding (30-year plan) and capable of completing Title 10-mandated amphibious warfighting functions.

Seabasing Integration Division

Key Interface Points

Seabasing

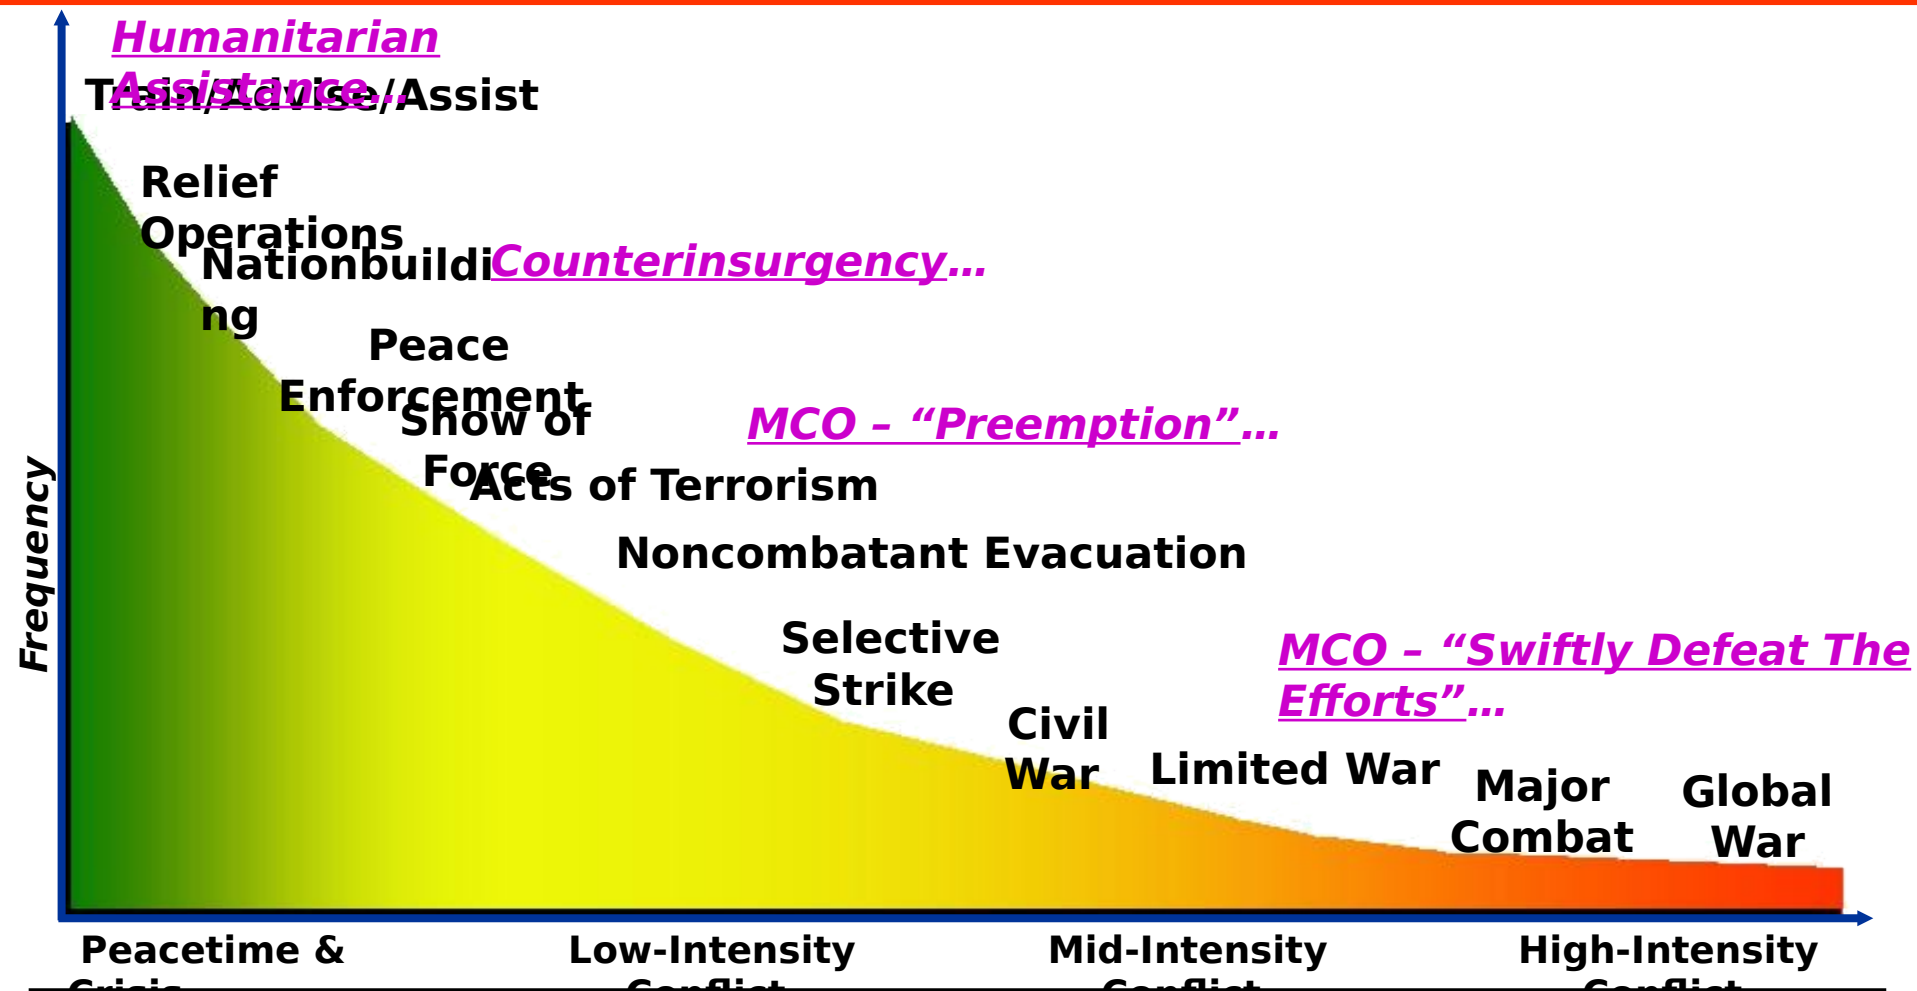

- **National capability for global force projection**
 - Exploits sea as maneuver space 365 days a year
- **Enables capabilities of Coalition/Joint Forces**
- **Maximizes the effects of forward presence**
- **Reduces dependence on vulnerable land bases, “steps lightly” on allies and partners**
 - Increased options for the President

“Our forces in the next century must be agile, lethal, readily deployable... We must be able to project our power over long distances, in days or weeks, rather than months”
President G.W. Bush

Joint Seabasing: Scalable and Responsive Power Projection

Seabasing will provide...the capability to dissuade a potential adversary... and, if necessary, project joint combat power within reduced timelines... with operational independence of HNS....SECNAV, March 05

Today's Capability

Improved Navy Lighterage System

Surge Amphibs at Sea

Legacy MPF

Roll on/Roll off Discharge Facility (RRDF)

High Speed Vessel

LCAC

Tomorrows Capabilities Sea basing

Seabasing Overarching View

CONUS
APOE's
SPOE's

Key Attributes

- No secure beach or host nation required
- No "iron mountain" ashore to protect
- Assembles troops & equipment at sea
- Selectively offloadable for different missions
- Sustainment and reconstitution of fighting forces

What's in the Seabase?

Carrier Strike Group

Expeditionary Strike Group

**Maritime
Prepositioning
Group**

**Combat
Logistics Force
Ships**

**Coalition Force
and Sister Service
Ships**

**Task organized forces
to meet
COCOM mission
requirements**

Connectors

***Seabasing is more than just
MPF(F)...***

Deploy as a MEB to fight as a MEF

How we fight

MPF(F) Contribution

- MCO requires MEF (3.0 MEB's) level forcible entry

Echelonment of the force is a mitigation strategy for reducing the risk associated w/AE lift shortfall

- Echelonment

AE: 2.0 MEB (Amphibious Ships)
(Rein): 1.0 MEB (MPF(F))

(Reinforcing)

MCRP; (Rein), includes the forward phasing of additional forces...forming a larger MAGTF from smaller initial forces whereby a single MAGTF is expanded...through the addition of personnel, equipment, and organizations by sea/or airlift...can be used to combine multiple MAGTF's.

AFOE: Remaining assets of the MEF w/sustainment (Surge Shipping with RBE of two MEBs)

- **Rapid Force closure**
- **At-sea arrival and assembly of forces**
- **Employment of Surface and Vertical BLT's**
- **Selective offload of equipment sets to meet mission**
- **Persistent sustainment**
- **At Sea Reconstitution**
- **Supports forward engagement and forcible entry**
- **MPF(F) by design is not assault echelon shipping, will not count as AE Shipping; therefore, MPF(F) forces are not forcible entry capable**

Definitions

MPF(F) is NOT AFOE but necessary to complete the MEF

Concept of Employment

- **Assault Echelon (AE)** - "...the element of a force comprised of tailored units and aircraft assigned to conduct the initial assault..."
and provide rapid MEB level reinforcement!
- **Assault Follow On Echelon (AFOE)** - "Equipment and Supplies required to support and sustain the assault.... normally required in the objective area no later than five days after commencement of the assault landing."
- **Lodgment Stabilization** - "Support the increasing flow of forces and logistical resource requirements... joint force must rapidly build up combat power in the lodgment...take immediate steps to optimize

Maritime Expeditionary Capabilities Supporting the Long War

Phase 0: Shape the Environment.

This phase involves those joint, interagency and multinational activities conducted on an ongoing, routine basis to assure or solidify friendly relationships and alliances and/or deter potential adversaries.

MPF(F)

Amphib

Phase 1: Deter the Enemy

This phase focuses on deterring specific opponents by demonstrating the capability and resolve to apply force in pursuit of U.S. interests. These actions will likely build upon Phase 0 activities and may include a show of force or initiatives that would facilitate deployment, employment, and sustainment of additional forces within the region.

MPF(F)

Amphib

MPF

Phase 2: Seize the Initiative.

Hostilities commence during this phase. Combat power is applied to delay, impede, halt, or dislodge the adversary as well as to gain access to theater infrastructure and enhance friendly freedom of action. Concurrently, assistance is provided to relieve conditions that precipitated the crisis in order to promote stability.

Amphib (Primary)

MPF(F)
(Reinforce)

Phase 3: Dominate the Enemy.

The focus during this phase is on the exploitation, pursuit, and destruction of the enemy in order to break the opponent's will for organized resistance. Stability operations will also be conducted as needed to facilitate transition to the next phase.

AFOE

APS

Phase 4: Stabilize The Environment

The priority during this phase will be on stability operations, the reconstitution of infrastructure, and the restoration of services. This phase concludes with the transfer of regional authority to a legitimate civil entity.

MPF/APS

MPF(F)

Phase 5: Enable Civil Authority.

Legitimate civil authorities are enabled in their efforts to provide essential services to the populace. These activities include required coordination activities by U.S. military forces with multinational, interagency, and non-governmental organizations while promoting a favorable attitude among the populace toward U.S. and host nation objectives.

MPF/APS

MPF(F)

*Agility *Deployability *Self-sufficiency *Adaptability
*Interoperability

Maritime Expeditionary Capabilities Supporting JFEO

MPF(F) Contributes/Enhances Rapid Build-up Ashore

Key Capability Attributes

- **Amphibious Warfare Ships**

- Assault Echelon shipping; capability to cohesively employ surface and vertical AE elements/units in anti-access environment
- Built to MILSTDs, Inherent survivability, self-defense, and Navy crewing to support maritime forcible entry operations
- Interoperable within a Seabase
- Forward presence, deterrence

- **Maritime Prepositioning Force (Future) (MPF(F))**

- *MPF(F) is not assault echelon shipping; therefore, MPF(F) forces are not forcible entry capable*
- Built to commercial standards, one compartment flooding, system redundancy limited, No self-defense, requires Sea Shield in a non permissive environment, MSC Crew
- Capable of at-sea arrival and assembly of forces; selective offload of equipment sets to meet unique mission requirements for Seabased Ops, including reinforcing a MEF
- Contribute to Forward presence, deterrence and potential capability to support forward engagement requirements by split ops

- **Joint High Speed Vessel (JHSV)**

- Aluminum hull, commercial car ferry (non-developmental) technology
- Not suitable for operations in anti-access environment
- Minimum aviation/C2 capability

Amphib and MPF(F)

Organization for Deployment and Employment

Lift Requirement

MAGTF Combat Systems

DRAFT 10 March 2005

Eagle Eye UAV

VUAV Block 1 (Eagle Eye) provides electronic observation, IR and Allground radar.

UH-1Y

Supports 8 combat loaded troops with a crew of 4. Maximum payload: 3220 lbs. Long range cruise: 135 kts. Maximum Continuous Power speed: 158 kts. Mission radius: 130nm with a 2180lb payload. Maximum endurance: 3.3 hrs.

AH-1Z(W)

AH-1Z: Six weapons stations, long range cruise is 134 kts, dive speed: 222 kts, mission radius: 125 nm with a 2500lb payload. Maximum Continuous Power speed: 155 kts. Maximum endurance: 3.3 hrs.

MV-22

MV-22 (Osprey): Self deploy up to 2100 nm with one refueling. Speed: 240 kts. Capable of external loads of 10,000 lbs (HMMWV).

HLR

HLR (CH-53K): Capable of 27,000 lbs. To 110nm, HLR MV-22 loads for sustainment.

Joint Strike Fighter

Joint Strike Fighter: STOVL, operates from L Class CV and austere sites. Combat radius is 450 nm, air to air and air to ground capable.

CLAWS

Rapidly deployable, all-weather, standoff air defense. Counters cruise missiles, fixed and rotary wing aircraft.

JPADS

Highly Accurate, autonomously guided, able to deliver fully rigged bundles weights from 250lbs up to 1200lbs. Being developed to reach a fully rigged bundle weight of 10,000lbs. Capable to deliver multiple bundles to multiple destinations from one aircraft to multiple aircraft.

Dragon Runner

Small, four-wheeled, non-portable mobile ground sensor designed to increase situational awareness by providing observation of tactical objectives and potential danger areas beyond line of sight where human vision is impractical or unsustainable.

Gladiator

Unmanned multipurpose weapon and scouting platform capable of working the APLOS, MGS SAW and M400 Machine Gun. Future users payloads may include non-lethal weapons, communications relay, non-supply, casualty evacuation, or counter sniper employment.

ITV

ITV internally transportable by MV-22 and CH-53E. The vehicle must be designed so that the weapon stations can be employed 40 seconds upon exiting the aircraft and support a 2000 lbs payload.

IFAV

The Infantry Fast Attack Vehicle is a high mobility, multi-mission vehicle that is designed to provide the MAGTF with improved ground mobility.

LWPM

The Lightweight Prime Mover is an air transportable, protected vehicle that is capable of towing the M777 howitzer and will accommodate 7-10 battle equipped Marines.

HMMWV(R)

Capability shortfall in the present HMMWV-A2 fleet are being studied. Areas of concern are: armor, power train, suspension, maneuverability.

MTVR

Medium Tactical Vehicle Replacement is designed to meet a 70% off-road and 30% on-road transport requirement. Can carry a 7 ton payload on primary and secondary roads.

LVSR

Logistics Vehicle System Replacement: Heavy 30 meter transport, capable of 22.5 tons on road, 16.5 tons off-road. Capable of handling 150 containers.

LAV-25

Provides MAGTF with the capability to conduct reconnaissance, security, economy of force, and limited offensive/defensive actions. Service Life Extension underway to improve survivability and extend life to 15 years.

EFV

MAGTF's primary mobility during amphibious operations and combat operations ashore. An armed and armored amphibious vehicle capable of transporting Marines from sea to land objectives.

MEFFV

MEFFV, in concept, will provide the 2015 and beyond MAGTF to complement the capabilities with a family of armored vehicles and armored fighting vehicles of the EFV.

MTA1

MAGTF's heavy armor capability. Firepower Enhancement increases detection range, recognition, target identification, decreases target engagement response time, integrates situational awareness systems.

EFSS

Lowest, most 120mm mortar and internally transported vehicle. From variety of mortars to greater than 7000 meters. The M26's heaviest indirect fire system.

LW155

155mm howitzer howitzer with GPS/INS-aided navigation and positioning will provide high volume, all-weather, indirect fires to almost 40 kilometers and precision to under three meters. It will fire all US 155mm artillery ammunition.

HIMARS

wheeled rocket/artillery system capable of firing rockets and missiles in the Multiple Launch Rocket System Family of Mortars to ranges greater than 45 kilometers.

CONDOR

The Command and Control Center/Network Center/Control Center (CONDOR) is the Marine Corps' primary command and control system. It will enable forces to maintain data network connectivity beyond line of sight.

IISR

The Integrated Info Squad Radio (IISR) is a next generation, personal radio, satellite, and control capability that enables the Infantry squad leader to communicate with his fire base leaders in complex terrain.

ECCS

The Expeditionary Command and Control System (ECCS) is a next generation, personal radio, satellite, and control capability that enables the Infantry squad leader to communicate with his fire base leaders in complex terrain.

TSM

The Transition Switch Module (TSM) provides a flexible Link Level Switch capability using commercial technology to provide Marine maneuver elements with robust voice/data switching, data transport, and bandwidth management capabilities.

TDN

The TDN augments the existing MAGTF command and control infrastructure to provide the MAGTF commander an integrated data network, forming the command and control backbone for MAGTF tactical data systems and Defense Message System (DMS).

JTRS

The Joint Tactical Radio System (JTRS) Family of Radios will be interoperable with legacy communication systems and capable of growth for new requirements and technologies, forming the tactical extension of the Transformational Communications Architecture (TCA) to access the services of the Global Information Grid (GIG).

MCEITS

MCEITS is the Marine Corps' contribution to meeting DoD Net-centric environment and information requirements. MCEITS will provide the Marine Corps the framework for the planned capabilities of Joint and DoD programs such as the Global Information Grid Bandwidth Expansion (GIG-BE) and Net-Centric Core Enterprise Services (NCCES).

MCEN

The Marine Corps Enterprise Network (MCEN) is the Marine Corps Component of the Global Information Grid (GIG). MCEN is an enterprise framework for IT and supports all information exchange requirements for Marine warfighters and our supporting establishment.

MAGTF C2

MAGTF C2 will deliver a "net to net" fully integrated, cross-functional MAGTF command and control capability. Significant development of current C2 programs that include C2C, C2C2, C2C3, C2C4, C2C5, etc. Capabilities include the ability to identify, track, command, and control assigned air, ground, and supporting forces; receive, store, process, and release critical command and control (C2) data architecture.

Marine Corps Expeditionary Ship Capabilities

Assault Echelon Shipping

Minimum MEB AE Lift Requirement (15 Ships)

- Five LHD-1 (Wasp Class)
- Five LPD-17 (San Antonio Class)
- Five LSD-41 (Whidbey Island Class)

MPF(F) Program Platforms

2 T-LHA(R)

1 T-LHD

3 T-AKR

3 MLP

3 T-AKE

2 Legacy T-AK

Capabilities

Amphibious Warfare Ships

- Inherent survivability, self-defense, and Navy crewing
- Maritime forcible entry operations
- Forward presence, deterrence

Maritime Prepositioning Force (Future) (MPF(F))

- Capable of at-sea arrival and assembly of forces
- Selective offload of equipment sets to meet Seabasing mission requirements
- Supports forward engagement and forcible entry Reinforcement
- **MPF(F) by design is not assault echelon shipping; therefore, MPF(F) forces are not**

Expeditionary Capabilities

Amphibious Warfare Ships

- 2.0 MEB AE per Strategic Planning Guidance; 15 Ao Ships per MEB AE
- Total 30 operationally available ships
 - 10 LHD/LHA(R)
 - 10 LPD-17
 - 10 LSD-41/49 (or equivalent replacement)
 - Average availability is 85% (for planning purposes)
 - Minimum 11/11/11 ships to meet 30 Ao requirement

Maritime Prepositioning Force (Future)

- One squadron

Legacy Maritime Prepositioning Squadrons

- Retain two squadrons to maintain afloat prepositioning capacity

Amphibious Shipping

Amphibious Assault Ship Replacement LHA-6/9

Preliminary Design Platform

Description

LHA-6

Displacement, Full (LHD)	44,971 lt
Speed	22.2 kts
Length	844 ft
Beam	106 ft
Draft	28.82 ft (Full Load)
Crew	102 Officers; 78 SNCO; 1024 Enlisted
Marine Detachment	1,687 troops; 184 surge
Med Capability	2 Med OR; 24 Ward
Surface Interface Well	0
Flight Deck	9 CH-53K Spots
Elevators	1 Port (37 ½ t); 1 Starboard (37 ½ t)
Hangar Bay / High Bay	30,542 ft ² / Two 7 Frame High Bay (49 ft)
Vehicle Square	19,112 ft ²
Cargo/Ammo Cube	145,963 ft ³
Cargo Fuel (JP-5)	1,300,000 gal

Program Status

Issues

- **LHA 6 Class (LHA(R) Flight 0), a transformational ship to replace the LHA 1 class of amphibious assault ships.**
 - Will have the flexibility to operate in the traditional role as the flagship for an ESG as well as to support the Assault Echelon of a MEF; provides the flexibility to operate and be a vital part of the Sea Base.
- **Program to enhance amphibious aviation capability-meet increased demand created by JSF-MV22.**
 - Compliments the MEU, 1:1 Future composite ACE (6 F-35B, 12 MV-22B, 4 CH-53K, 4 AH-1Z, 3 UH-1Y, and 2 MH-60 SAR)
 - Or a JSF platform to host 22 F-35B aircraft.
- **LHA-6 planned w/o well-deck, contract awarded June 07; Milestone B ADM Feb 06; start FAB Nov**

- **LHA-9 design decision (RIC & Well Deck) pending based upon design for LHA-7 FY10 ship intended for the MPF(F) big deck.**
- **Expeditionary Role as Amphibious Warfare Ship to support the Strategic Planning Guidance and provide the Operational Availability (Ao) to support 2.0 MEB Assault Echelon; Naval Shipbuilding Plan projects 9 Big Decks (7 LHDs & 2 LHA(R)s in FY22. This is in contradiction to USMC requirement for 11 AE Big Decks.**
- **ESC will support CONOPS refinement during Spring 08.**

Revolution/Evolution

Past

- Operational Capability
- Forward Presence
- 13 Ships in 3 Squadrons
- Each Squadron supported
- MEB of 14,400+ Marines
- Proven Force Enabler

Present

- MPF Enhancement
 - 3 additional Ships (1 per sqdn)
 - Additional Capabilities:
 - Naval Mobile Constr. Bn
 - Naval Fleet Hospital
 - Expeditionary Airfield

Future

- MPF Future (2015 and Beyond)
- Seabasing

Prepositioning Today and Tomorrow

- **MPF**

- Port-to-port (or in-stream) capability
 - Require Host Nation Support (HNS) to close and assemble the force
 - Significant lodgment - both APOD and SPOD required in theater
 - High force protection bill associated with establishing and maintaining a secure lodgment
 - Ships densely packed, assemble ashore
-

- **MPF(F)**

- Operate in restrictive access environments
- Arrival, assemble and integrate at sea
- Selectively offloadable, tailorable force packages
- Employ combat ready forces from OTH
- Indefinite sustainment from the sea base up to a brigade size force operating ashore
- Reconstitute forces to the sea base for redeployment

MPF(F)'s Geo-Political Applications

MPF(F) - Responsive and Scalable across the full "Range of Military Operations"

MPF(F) Squadron Required Capabilities

- ✓ Preposition the MEB (1 Air and 2 Surface Battalions [selective offload])
- ✓ Close a MEB in 10-14 days
- ✓ At Sea Arrival and Assembly in 24-72 Hours
- ✓ Employ one Surface Battalion and one Vertical Battalion in 8-10 hours
- ✓ Provide accommodations and aircraft/vehicle maintenance capability (O level/selected I level) for a MEB
- ✓ Sustain the forces ashore from the Sea Base
- ✓ Provide Level II (resuscitative surgery) medical support
- ✓ Accommodate and operate organic surface connectors
- ✓ Conduct external operations in Sea State 3 threshold/Sea State 4 objective
- ✓ Provide MEB C2

<u>2015 MEB assumptions</u>		<u>2015 R/W/T/R MEB ACE</u>	<u>Required Squadron Capacity</u>

Notional MPF(F) MLP

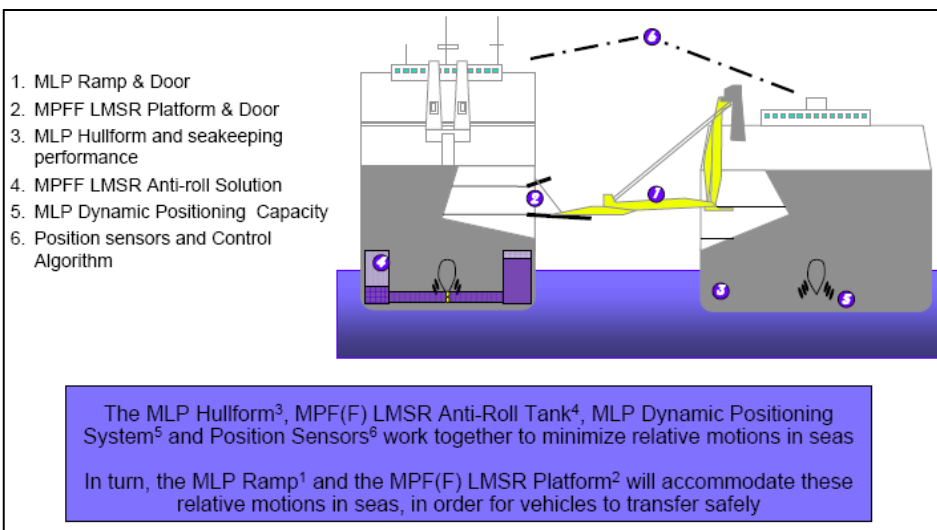

ional Concept - Configuration & Detail Design to be Completed by Shipyard

Vehicle Transfer System (VTS)

VTS is the critical new technology that enables surface movement

- **Primary system to transfer vehicles and personnel from the LMSRs to the MLPs underway**
- **Dynamic positioning (DP) of MLP to LMSR while underway**
- **1 VTS per MLP (no redundancy)**
- **24 hour ship transfer (notional) period through NATO SS3**

MPF(F) R&D Program At-Sea Test

Alongside operations (also called skin-to-skin) permits the USNS Red Cloud to lower the ramp and transfer vehicles to the Dockwise Mighty Servant 3, for further loading onto LCACs. This simulates the assembly and offload of up to 1/3 of a surface Battalion Landing Team.

Joint High Speed Vessel (JHSV)

JHSV Capabilities & Characteristics

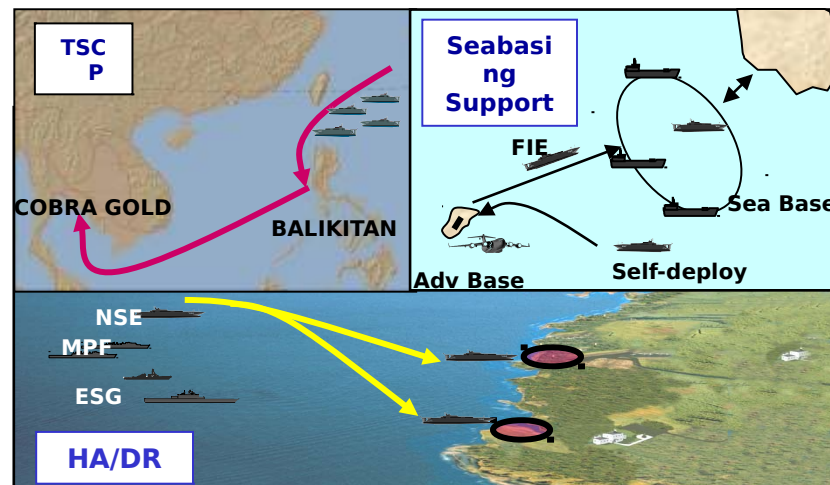

- Shallow draft (< 15'), high speed (> 35 kts loaded)
 - Ability to enter small, austere/degraded ports unassisted
- Self-deploying between theaters
- 600-700 ST payload, 1200 NM range, 35 kts, Sea State 3
 - Smaller payloads = greater range, larger payloads = less range
- Seating for 312 Marines (Co (rein)); berthing for 104 Marines
- 20-22,000 sqft mission deck/cargo bay (M1A2, MTVR compatible)
- Slewing ramp (astern to 40 degrees forward)
- Level I, Class 2 flight deck for H-60s, H-46s, UH-/AH-1 helicopters
 - Fuel only, no services
- 20 ST crane for TEU movement, small boat launch & recovery

JHSV Quantity and Basing

- 8 JHSVs funded (5 Army, 3 Navy), 2 addl USN JHSVs in PR09
- **Quantity funded does not equal quantity required**
- Acquisition objective TBD by MS B (Aug '08)
 - PACOM, AoA, MCCDC studies suggest 16 JHSVs needed across DOD
- **7 JHSV equivalents meet USMC requirements**
 - Based on MARFOR TSCP, GWOT, intra-theater lift requirements
 - Requirement quantified in “vessel days per year” v. specific # of JHSVs
 - Assumes 180 days operational availability (Ao) per year per JHSV
 - Does not explore overlap between USN, USMC requirements
- Notional basing scheme (JHSVs swing between theaters as needed)
 - PACOM = 3 (Hawaii, Guam, Okinawa)

USMC JHSV Missions (The “Intra-Theater Connector”)

Joint Maritime Assault Connector (JMAC)

Capabilities

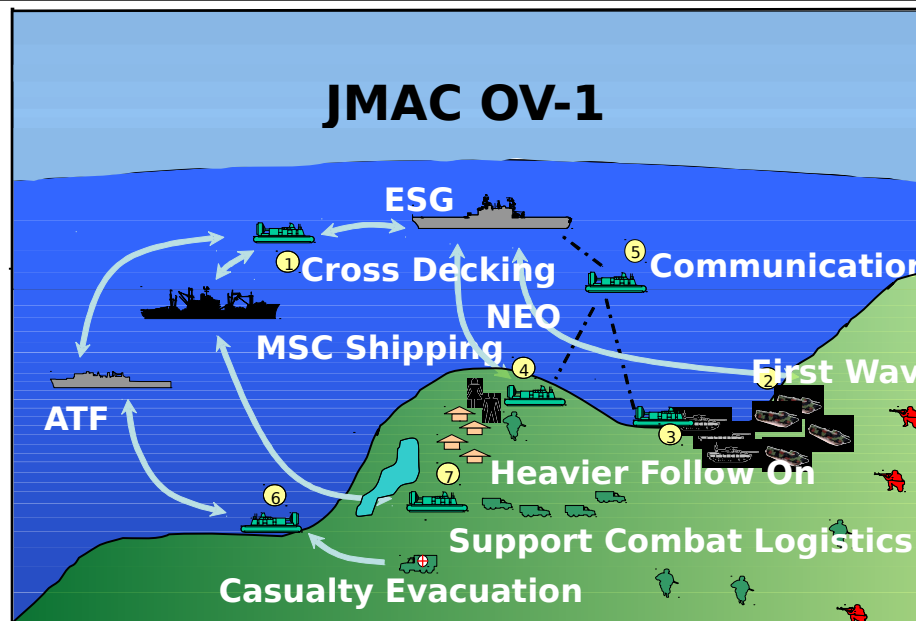

- High Speed, Over-The-Beach, Ship-To-Shore Amphibious Capability to Lift All Equipment Organic to the Ground Elements of a Marine Air/Ground Task Force
- Ability to Operate independent of tides, water depth, underwater obstacles, in NATO SS 3-4 at 25 nm or less
- Designed to address 2 gaps:
 - Conduct movement
 - Prepare for movement

Requirements

- 2015 timeframe - significant gaps in brigade-sized maneuver concurrent with retirement of the Landing Craft, Air Cushion (LCAC) and Landing Craft, Utility (LCU) as they reach the end of operational service life
- 72 LCAC required to meet 3.0 MEB and required operational capability/ projected operational environment
- 72 LCAC required to meet COCOM OPLAN requirement of 60 operational craft
- LCAC fleet falls below required 72 LCAC in 2014

Material Alternatives

- LCAC SLEP
- Standard Conventional 73 Short Ton (SC-73)
- Large Conventional 146 Short Ton (LC-146))

Joint Seabasing Experimentation

Science & Technology and Research & *Development*
